INSTALLATION INSTRUCTIONS

Plan Your Project: Determine the desired location for your Grill Island and gather all required materials and tools. Plan for gas service installation (Natural Gas or Liquid Propane) and if you are installing an optional sink or refrigerator, plan for electric or plumbing services as required. All services should be installed per code by licensed individuals.

MATERIALS NEEDED FOR GRILL ISLAND

(2) PALLETS OF KODAH WALL BLOCK

(2) PALLETS OF KODAH CORNER BLOCK

ADDITIONAL MATERIALS NEEDED

1. 4' x 10' (1.2 m x 3m) Countertop
2. Shown with standard Grill and 40" double access door (Additional sizes and accessories can be added as desired)
3. Concrete adhesive and silicone adhesive
4. (1) Cubic yard of crushed stone

TOOLS REQUIRED

1. Eye and hearing protection
2. Measuring tape, level, and square
3. Mallet or dead blow hammer
4. String line and stakes
5. Masonry cut-off saw
6. Vibratory plate compactor
7. Caulk gun

INSTALLATION INSTRUCTIONS

1. **Locate Grill Island:** Mark or stake out location of grill island and centerline on the ground. **See Detail A.**
2. **Install Utilities:** Install gas, electric, water and drain lines per local building code. **See Detail A** for stub-up location suggestions.
3. **Cut Out Counter:** Refer to the installation guide or specifications provided by the grill manufacturer for cut-out dimensions. Save the remnants as they can be used as foundations for optional refrigerator or cabinet.
4. **Prepare Foundation:** Excavate and prepare a 6" deep compacted stone foundation for the grill island.
 - a. Remove sod and topsoil from an area 4" wider than the grill island in all directions.
 - b. Compact existing grade. Foundation soil should be firm, dry, and free of debris, stones, roots, etc.
 - c. Place and compact 6" of crushed stone foundation material. Compact using a vibrator plate compactor.
 - d. Mark out the base of the grill island and centerline and optional refrigerator or propane cabinets if applicable.

NOTE: A concrete pad may be considered for an even more stable foundation.

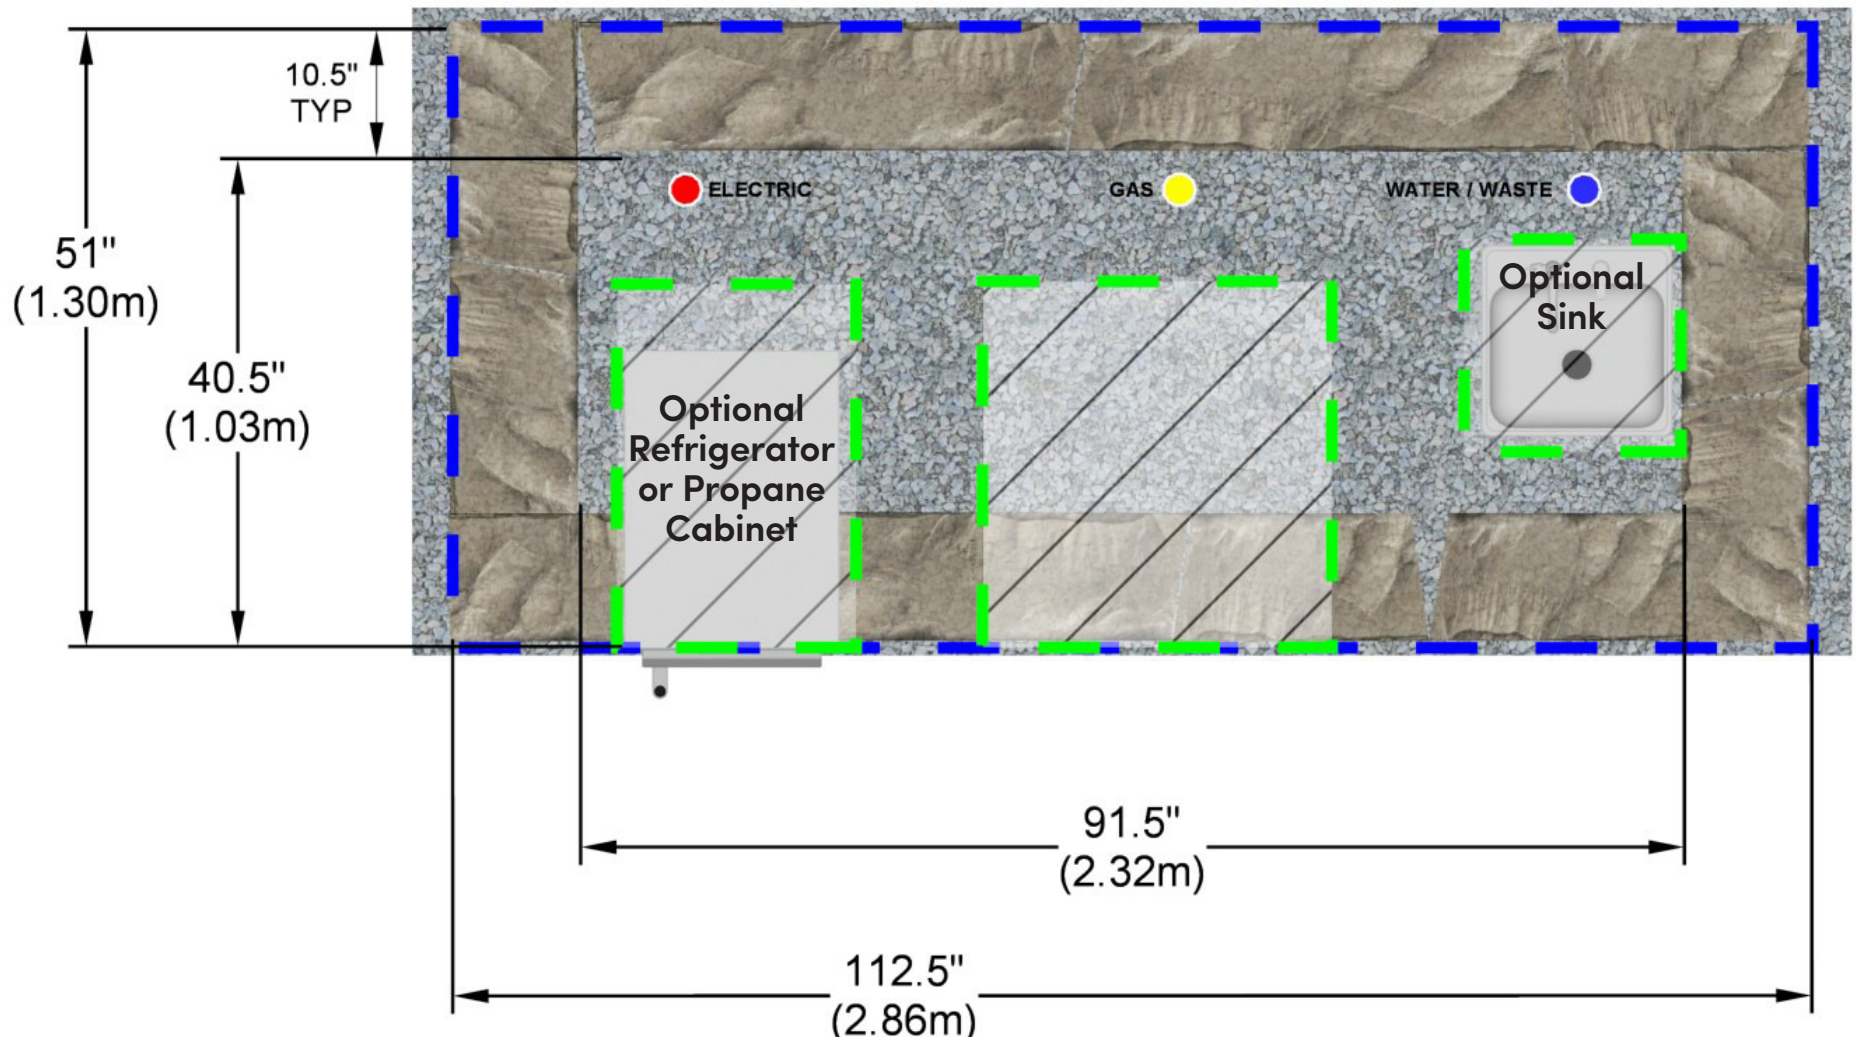

5. **Build Grill Island up to Counter Level:** (See attached block layouts for details)
 - a. Tape cardboard to front and corners of appliances or accessories to protect the exposed faces.
 - b. Set bottom course of blocks.
 - c. Check base course for level and square and adjust if necessary.
 - d. Continue to lay and trim blocks where indicated.

NOTE: if additional appliances are included, there will be additional cuts required that are NOT shown in the layout. Glue blocks together as you build up using concrete adhesive.

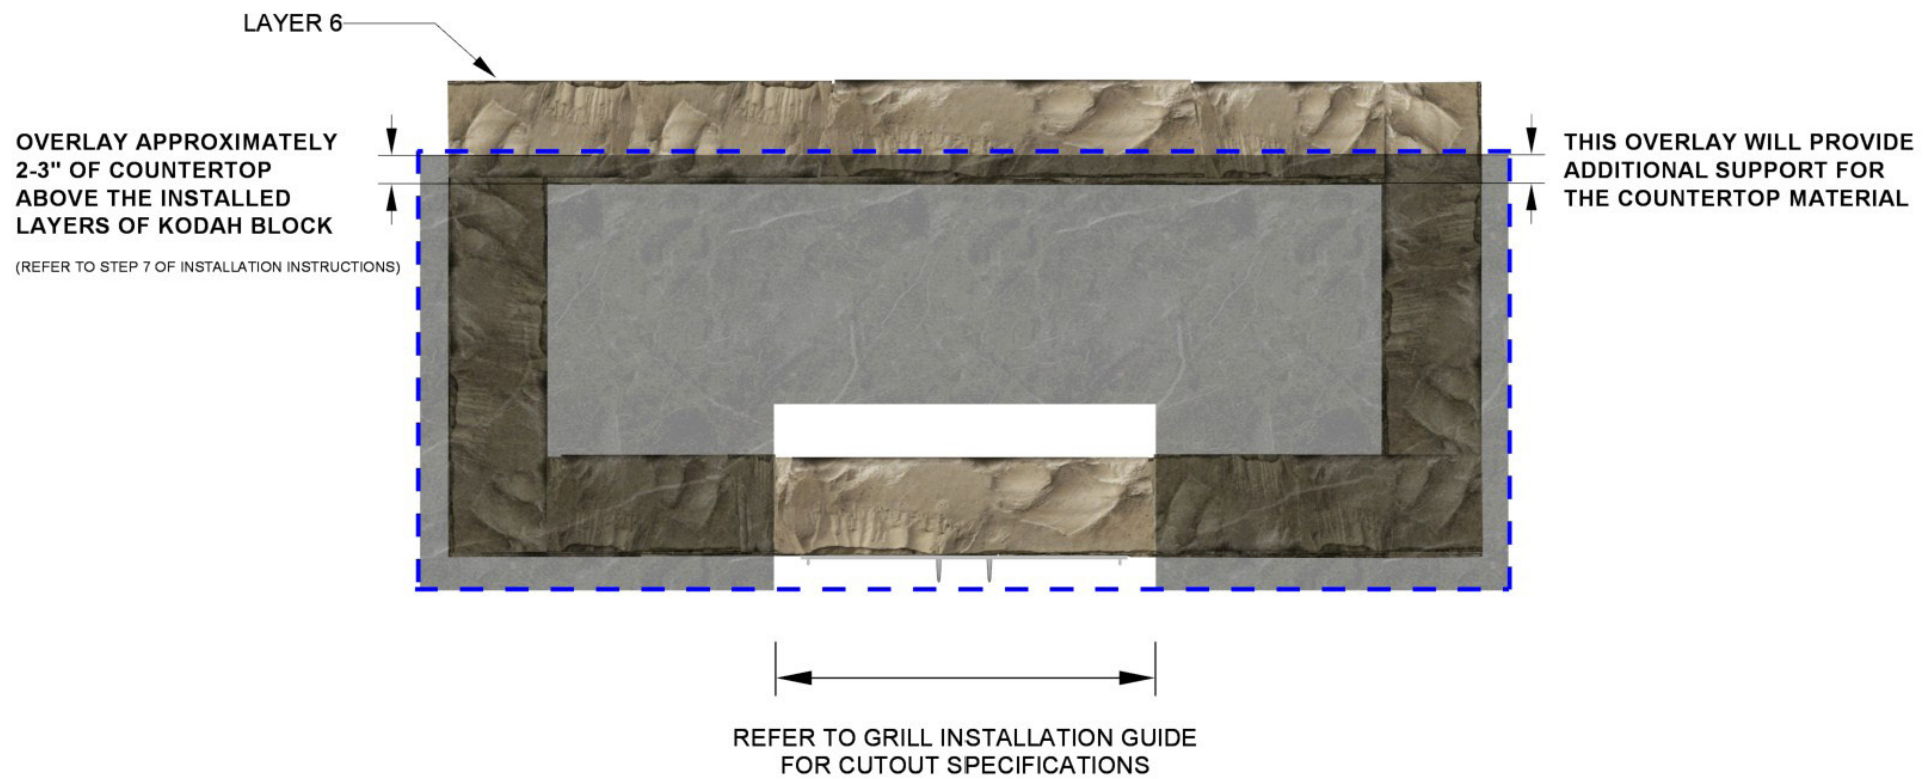

6. **Trim Blocks for Optional Sink:** If optional sink is installed, trim blocks located directly below the sink if necessary.
7. **Install Countertop:**
 - a. After completing **Layer 6**, mark approximately 2-3" past the inside edge of **Layer 6** as shown in **Detail B**. The back side of **Layer 6** will act as a ledge for the countertop to rest on as the countertop will expand beyond the inside edge of the grill island.
 - b. Trim the bottom side of the blocks in **Layer 7** in order to create a notch. This notch should be 2-3" deep and the height matching the countertop thickness. These notches will help achieve the desired look. **See Detail B (cont'd).**
 - c. After the notches have been trimmed, set blocks from **Layer 7** WITHOUT adhesive.
8. **Install Countertop:** Set and glue countertop above grill island and push toward the back until countertop slides into the notches in **Layer 7**. Once set, glue the **Layer 7** blocks in place. Consider using an exterior grade silicone caulk to seal the countertop and the bottom of **Layer 7**.
9. **Install Back Splash:** Set back splash blocks as shown in attached block layout details. Glue in place with concrete adhesive.
10. **Install Optional Sink:** Install sink through cutout in counter top and glue in place with silicone adhesive.
11. **Hook up Utilities:** Remove grill cabinet and install utilities per local code. Replace grill cabinet when completed.
12. **Install Grill:** Install grill on countertop. Grill hangs on edges of countertop from flange on the side of the grill. Hook up gas line per manufacturer's recommendations. Open grill cover to ensure proper clearance with back splash. When operating correctly, glue grill under flanges to countertop using silicone adhesive.

DETAIL A: SITE LAYOUT AND UTILITY PLAN

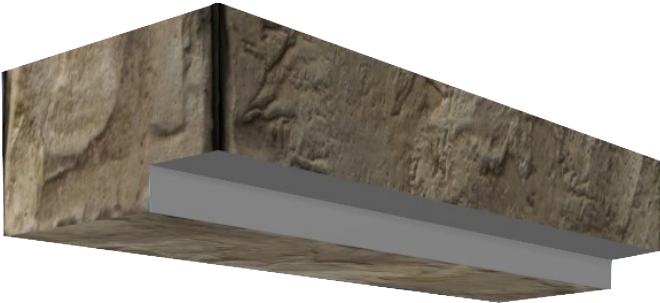

Note: Review the spacing within the grill island when installing additional appliances or accessories. Refer to local building codes for proper utility location and requirements for ventilation.

CUSTOMIZATION IDEAS

Note: Customizations will require additional cuts and modifications not shown in this installation guide.
