

Pole Base Spread Footing Foundations

Anytime. Anywhere.

Pole Base precast spread footing foundations allow you to take back control of your job schedule and your job site. Unlike cast-in-place options, Pole Base allows you to make your jobs more predictable and more profitable. That's because the bases are created in a controlled environment and delivered to the job site ready to go with your exact specifications.

You can install the bases on your own schedule—no need to wait for concrete trucks to arrive or for the weather to cooperate. Simply excavate your hole, place the base, backfill, and you're ready to attach your light poles the same day. Less headaches during installation means better efficiency for your whole project!

No more fuss. No more stress.

We've eliminated on-site assembly, meaning you can forget about all the tedious concrete prep work and curing time. We've taken care of it, so you can get on with the rest of your project.

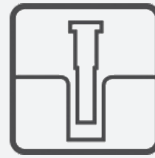

There's no need for concrete trucks, so you don't have to worry about short loads or bad weather. You're back in charge.

Optimize productivity across your whole project through more efficient installation. With low labor requirements and the ability to stage your inventory on site for quick access, a multi-day project can streamline into a single day's worth of work, depending on quantity and your workforce.

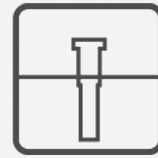

How it Works:

1. Excavate

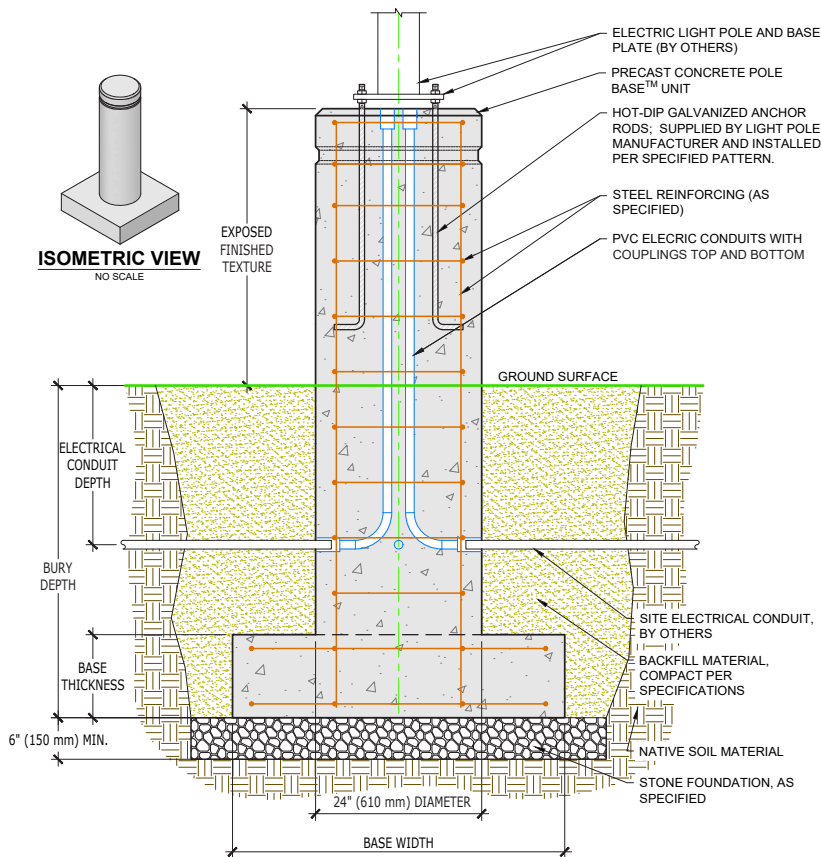

2. Place

3. Backfill

4. Profit

24 inch (610 mm) Diameter
Round Pole Base Spread Footing

Power of Precast

Made from architectural grade concrete and specified at 5000 psi (34.5 MPa) to ensure your work won't crack under pressure.

Flexibility & Functionality

Work in any environmental scenario to stay on your own schedule (not Mother Nature's), while getting the end result you want.

Concrete with Convenience

Eliminate the concrete trucks, streamlining your work. Stop squeezing trucks into unfavorable sites and start staging your ready-to-go bases where you want.

Fast & Easy Installation

Inventory precast units on site for quick access and installation. Just excavate, place, backfill, attach your poles, and you're done!
